Professional Summary

- Software Engineer with 1.5+ years of experience specializing in Full Stack Development, high-performance backend systems, and distributed architectures.
 - Technical Expert in Node.js, TypeScript, and React, with a proven track record of successfully migrating monolithic systems to scalable Microservices.
 - Fintech Specialist with deep expertise in Escrow transaction platforms, secure banking proxies, and digital signature integrations (UAEPASS).
 - Systems Architect experienced in IoT data ingestion via custom TCP servers and implementing robust DevOps/monitoring via Kubernetes and the LGTM stack.
-

Technical Skills

- **Backend:** Node.js, Bun, NestJS, Fastify, Platformatic, Hono, Express, Microservices, Monorepos, Effect, ElysiaJS
- **Frontend:** React, Next.js, TanStack (Router, Query, Form), Shadcn UI, Tailwind CSS, Ant Designs, SASS Css, Zustand

- **Databases & Messaging:** PostgreSQL, MySQL, MongoDB, Redis, Apache Kafka
 - **Infrastructure & DevOps:** Linux, Docker, Kubernetes (EKS), AWS (S3, EC2, SES, CloudFront), GitHub Actions, OpenTelemetry (LGTM Stack)
 - **Tooling:** TypeScript, Zod, Drizzle, Prisma, Biome, ESLint, pnpm
-

Professional Experience

IT IDOL TECHNOLOGIES | *Software Engineer* | **Aug 2025 – Present**

- **Fintech & Blockchain:** Integrated 3rd-party blockchain APIs into an Escrow system for real-time data synchronization across services via Apache Kafka.
- **Distributed Systems:** Engineered a high-availability Job Scheduler using Redis expiry notifications and Kafka to handle recurring and one-time tasks with distributed locking.
- **Observability:** Implemented full-stack monitoring using OpenTelemetry (Grafana, Loki, Tempo, Prometheus) to ensure production stability and rapid debugging.
- **Core Banking Infrastructure:** Developed internal fund transfer APIs and Bank Adapters to maintain a consistent interface across disparate 3rd-party banking providers.

IT IDOL TECHNOLOGIES | *Associate Software Engineer* | **Aug 2024 – Aug 2025**

- **IoT & Networking:** Architected a custom TCP server for real-time hardware communication, processing location and status data for device tracking.
 - **Geographical Logic:** Implemented Geofencing alerts and automated trip tracking logic based on real-time device movement.
 - **Data Engineering:** Authored complex PostgreSQL queries using nested joins and unions for granular E-commerce business intelligence reporting.
-

Projects & Architecture

1. Escrow Transaction Platform (Flagship Project)

A comprehensive fintech solution involving a transition from Legacy to Microservices.

A. Microservices Rewrite (Current)

- **Tech:** Platformatic (Fastify), Kubernetes, MySQL, MongoDB, Kafka, Redis, Docker.
- **Escrow Service:** Managed full transaction lifecycles, document verification, and automated dispute/refund handling.
- **Job & Webhook Management:** Built a resilient retry system for failed client notifications and transfer failures using the centralized job scheduler.
- **Data Access:** Developed a custom MySQL repository pattern to optimize complex data retrieval and filtering.

B. Bank Service (Shared Infrastructure)

- **Tech:** Node.js, Express, MongoDB, GPG Encryption, MTLS.
- **Architecture:** Serves both legacy and microservice layers. Migrated v1 synchronous transfers to v2 asynchronous processing with secure HMAC-authenticated webhooks.
- **Bank Proxy:** Designed a secure gateway for 3rd-party banks handling MTLS and payload encryption/decryption via GPG keys.

C. Legacy Platform Service (Production Reference)

- **Tech:** NestJS, PostgreSQL, Redis, Mongodb, Swagger.
- **Impact:** Integrated UAEPASS for digital signatures and vaulting to secure user onboarding and transactions.

D. Frontend Ecosystem (Admin & User Interface)

- **Tech:** React, TanStack Suite, Monorepo Architecture, Shadcn UI, Biome.
- **Role:** Lead Frontend Developer. Optimized performance via TanStack Query caching and preload-on-hover logic. Implemented complex

transaction history views with milestone tracking.

2. Locshark (IoT Tracking)

- **Tech:** Node.js, Express, MongoDB, Stripe, TCP Server.
- **Impact:** Built an end-to-end device management platform. Created the ingestion layer for device status via TCP and integrated Stripe for subscription-based access.

3. E-commerce

- **Tech:** Node.js, PostgreSQL, Stripe, Sequelize.
 - **Impact:** Developed a robust RBAC permission system and an automated shipping module for delivery partner assignment based on volumetric packaging calculations.
-

Education

- **Bachelor of Computer Applications (BCA)**
- VNSGU, Class of 2024 | **GPA: 9.3/10.0**
